REGISTER OF MUSCULOSKELETAL MEDICINE TEACHERS

Australian Association of Musculoskeletal Medicine

OVERVIEW

The burden of musculoskeletal conditions is immense. In the 2001 census, a third of the Australian population complained of a chronic musculoskeletal condition. Musculoskeletal complaints comprise 15% of all general practice consultations. This underlines the importance of adequately equipping Australian doctors with the knowledge and skills to deal confidently and competently with patients with musculoskeletal pain and disability.

To support medical education about musculoskeletal conditions at both undergraduate and postgraduate levels, the Australian Association of Musculoskeletal Medicine (AAMM) has compiled this register of doctors with expertise in teaching musculoskeletal medicine. It is intended as a resource to help link providers of medical education with teachers of musculoskeletal medicine in their region.

Over the last 40 years, musculoskeletal medicine has emerged as a special interest area in general practice and some specialist practice such as rehabilitation medicine. Musculoskeletal medicine deals with the diagnosis and conservative treatment of a wide range of musculoskeletal conditions, most commonly spinal pain and spinal referred pain, osteoarthritis, neuropathic pain, tendinopathies and other soft tissue pains. It draws on and integrates the knowledge and skills of several disciplines, including orthopaedics, rheumatology, rehabilitation medicine, physiotherapy and osteopathy.

Musculoskeletal medicine is characterised by a comprehensive biopsychosocial approach, informed by the basic sciences and clinical research, to provide a comprehensive and pragmatic approach to diagnosis and treatment. Treatment encompasses modalities ranging from education and exercises to manual therapy and injections.

The register provides details of doctors practising musculoskeletal medicine who are available to teach in undergraduate and postgraduate settings. It provides their contact details and qualifications, their type of practice and their special interests within musculoskeletal medicine. All doctors in the register are members of the AAMM, most have postgraduate diplomas in musculoskeletal medicine and some hold Fellowships of the Australian College of Physical Medicine and/or the Australasian Faculty of Musculoskeletal Medicine. The register is also available electronically on the AAMM website, www.musmed.com

We hope this register ultimately helps to improve the quantity and quality of musculoskeletal medicine practice in Australia.
